This video is part of a comprehensive series initially developed for William Paterson University and CUNY Hunter, aimed at providing an accessible and engaging introduction to stellar evolution and the H-R Diagram. The series covers the life cycle of stars, from their formation in molecular clouds to their eventual fate as white dwarfs, neutron stars, or black holes. It also explores the relationship between a star's temperature, luminosity, and spectral type, and how these properties change over time. The video is designed to be used in conjunction with other educational resources, such as textbooks and lecture notes, to provide a comprehensive understanding of stellar evolution. In this video, I will measure distances using the H-R Diagram. In this lecture, I explain how to read the H-R Diagram, explaining the stars and how they can be categorized using their spectra. Together with their distance, this provides a complete H-R Diagram for the Nearest and Brightest Stars Lab.
